

Supported File Formats: One Image, Many Views

Xinet® WebNative® Suite automatically generates Web previews for virtually any professional still image, document or video file. Including many RAW file formats not listed here, WebNative Suite previews more than 80 image file formats. Additional formats are supported with the Video product.

WebNative Suite

Web previews are automatically generated any time an asset is copied to a WebNative Suite volume. Files can be stored and accessed on the WebNative Suite server via a mounted AFP, SMB/CIFS volume (share). Alternately, files can be uploaded through a standard Web browser while logged into the WebNative Suite server or via the Xinet desktop Uploader application.

Prepress Formats

The WebNative Suite server can directly read the following file formats and generate a Web preview:

- Adobe Illustrator Native Document format and many Illustrator files created prior to CS Suite
- Alias PIX
- ArtP (ArtPRO CTs)
- BARCO CT and LW
- BMP
- Contex CT
- Contex (formerly Alias) Eclipse TILE
- Crosfield Studio 9000
- DALiM CT (with support for masks)
- DALiM LW
- DCS 1.0 and 2.0
- EPS/EPSF
- EPSP (Encapsulated PostScript with PC preview)
- Eskofot EskoScan
- JFIF (JPEG)
- GIF (Compuserve Graphics Interchange Format)
- PDF
- Photo CD
- Photoshop native
- PNG
- PSB (Photoshop Large Document Format)
- Raw camera formats
- Scitex CT and LW (also MaskCutter)

- SGI RGB (SGI Image Library)
- RAS (Sun Raster File)
- TIFF specification version 6.0 (1 bit, 8 bit Palette Color or Greyscale, Intel format, RGB, RGB with mask, CMYK, CMYK with mask; with packbits and lzw compression support)
- TIFF/IT
- TILE (Alias Eclipse Tile)
- X Window Dump File

Microsoft Office Documents

To generate Web previews for Microsoft Office documents (Word, Excel and Powerpoint), Open Office is used by the WebNative Suite server.

Quark XPress and Adobe InDesign Documents

Web previews are generated during normal document save by Xinet authored plug-ins.

Video for WebNative Suite

The Video product for WebNative Suite offers support for the following additional file formats for video, html and audio files.

Video File Formats

Web previews are automatically generated for the following movie file types:

- AVI (Audio Video Interleave)
- DV (Digital Video)
- FLV (Flash Video)
- MOV (QuickTime multimedia container file)
- MPEG, MPG (Moving Picture Experts Group)
- MP4 (Moving Picture Experts Group-4)
- WMV (Windows Media Video)
- VOB (Video Object)
- SWF (Shockwave Flash files)

HTML Files

Previews are generated for HTML files with the following file extensions, and also for rotating images on banner ads within Web sites:

- htm
- html
- mht
- url
- webloc
- webarchive

Audio Files

Audio files with imbedded image previews will have those previews extracted and displayed for the following filetypes:

- mpg4
- M4V
- M4VP
- MPEG
- MooV
- Mp3
- VfW
- AIFC
- RIFF
- ASF_
- dvc!
- SWFL
